JIB ARM Format (2 Axis)

The **PEE-POD 500** is the latest exciting development to come from A&C's dedication to professional performance and innovative technology. This lightweight remote camera head with a large budget specification, boasts a low budget cost.

This new digital range of small remote heads uses an innovative lightweight gearbox, that is self-contained with Motor/encoder, reduction gear train and onboard electronics.

The system is hassle free without the need for perfect balancing and gives the operator a real edge when it comes to producing great shots, all the time.

Perfect for situations where either size or weight are restricted and without the need to sacrifice performance and reliability.

Capable of comfortably handling camera loads of up to 66 lbs (30 kg) the head can weigh as little as 11 lbs (5kg). Its weather resistant gearboxes have surprising power and impressive response giving it a superb level of performance, even when conditions are less than ideal; creating a system that performs like a "Mouse on Steroids".

- The gearbox weighs less than 4 lbs, is water resistant and will handle a camera load of up to 66 lbs. It has a maximum speed of less than 2 seconds for one revolution, with smooth precise movement.
- These gearboxes are universal, with the ability for any gearbox to be used for Pan, Tilt, or Roll.
- The cabling is delightfully simple with a single 3-core cable handling both power and data for the entire system if required. Long cable runs are not a problem, with the choice of having the operator miles from the remote head. A very reliable low cost RF option is available.
- A new generation of lightweight economic control desks manage the **PEE-POD 500** system. These new control desks start with a no frills unit, just controlling Pan/Tilt/Roll without displays or keypad and progressing to full memory playback with computer interface.
- We are offering the 500 in a lightweight crane jib format (with adapters for many popular lightweight Jib arms) and a tabletop or post format, but the options will not stop there.
- The system is simple enough for clients to buy some of the components and custom build their own configuration.

Options Include:

- Multiple Heads
- Joystick
- Hand Wheels
- Adjustable Limits
- Video Lens Control
- BNC Link
- Mitchell Mount
- Third Axis
- Panbar
- Memory Playback
- Computer Interface
- Film Lens Control
- RF Link
- J JIB Mount
